OBJECTIVE

As a highly driven and results-oriented candidate who just completed the diploma in Software Development. I am looking for an entry-level job in the information technology industry where I can put my technical skills, inventiveness, and enthusiasm for innovation to use. I am eager to expand my abilities in a professional context, contribute to the success of the team, and learn and grow in a dynamic environment. I am confident in my capacity to swiftly adjust to new technologies and difficulties because I have a solid academic basis in programming languages, data structures, test levels, testing types, test approaches both automation and manual testing and software engineering principles, with a keen eye for detail and a passion for delivering high-quality software solutions. Seeking an entry-level role in software development or quality testing to apply my skills, learn from industry experts, and contribute to team success. I'm eager to start my tech career by bringing my energy, diligence, and openness to learning to a respectable company.

SKILLS

- Programming languages: C# | Java | JavaScript | HTML | CSS
- Technical skills: Database management (MySQL) | Methodologies (Agile, Scrum, Waterfall) | Version control

SOFT SKILLS

- Communication: I have knowledge of converting technical requirements, as well as nontechnical requirements to everyone involved in the project.
 - Teamwork: I can collaborate in team discussions and decision making to achieve project goals.
 - Adaptability: I can adapt to changing the project requirements and priorities.
 - Problem-solving: I can analyze complex problems and develop creative solutions.
 - Time management: I have a proven ability to balance conflicting demands from multiple final-year components while guaranteeing project compliance and on-time delivery.
 - Attention to details: Ensure accuracy and quality in code and deliverables.
-
